AI Is A Death Knell For Many Traditional IT Vendors

READ FULL ARTICLE

Artificial intelligence (AI) is quickly becoming a daily phenomenon -- whether it's staying organized with virtual assistants like Siri and Alexa, relying on Waze and Google Maps for the fastest commute time, or tagging photos with Facebook's facial recognition technology.

Gartner predicts by 2020, AI will be one of the five most important investment priorities for more than 30% of CIOs; and according to a report by Tata Consulting Services, IT is the business function that uses AI the most, with 68% of companies using AI for IT functions. Contrary to what one might expect, legacy IT vendors are actually at a disadvantage when it comes to capitalizing on AI. The massive shift to AI requires a technology rethink, but established vendors tend to cling to older "bread and butter" strategies that the market is moving on from.
